DETAILED ACTION

The IDS received 10/25/2005, 1/29/2007, the preliminary amendment received 10/24/2005 have been entered.

Election

Applicant's election with traverse of Group I, claims 1-10, in the reply filed on 4/11/2007 is acknowledged. The traversal is on the ground(s) that there would not be undue burden in examining the five groups of claims in a single application. This is not found persuasive because the arguments ("search burden") are not applicable to lack of unity restriction rules (PCT Rule 13.1). Further, the inventions lack the same or corresponding special technical feature as noted in the last office action.

The requirement is still deemed proper and is therefore made FINAL.

Claims 11-36 are nonelected and thus are withdrawn from further consideration.

Only claims 1-10 are presented for examination on the merits.

Specification

1. The title of the invention is not concise. A new title is required that is concise and clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smith et al. (Analytical Biochemistry 1984;138:119-124).

Smith et al. teach a transfer sheet that transfers a biologically active substance to screen cell lines in the production of monoclonal antibody (page 119, right column, 1st full paragraph), the sheet comprising a sheet base and a holding area (page 120, Fig. 1); wherein the biologically active substance is releasable from the sheet (page 119, left column, lines 8-10); wherein the sheet contains two or more holding areas (page 120, left column, 1st full paragraph); wherein the holding areas hold different biologically active substances or different combination of tow or more biologically active substances in different concentrations (page 121, left column, lines 3-4, and right column lines 2-6); wherein holding layer is formed on an entire or partial surface of the sheet base; wherein each holding area or a group of two or more area is surrounded by a protruding wall structure (page 120, left column 1st full paragraph and Fig. 1).

Smith does not teach that the sheet is to place on the culture plate; the sheet base is made from an elastic or flexible film; the holding area is a protruding portion provided on the sheet base to release the biologically active substance in a sustainable manner.

Page 4

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the method of Smith by using elastic or flexible sheet base to screen for cell culture because the flexible sheet base will provide a simpler and rapid screening procedure for cell culture (page 123, right column, 3rd full paragraph). One would have been motivated to make the modification because Smith et al. specifically described antigen immobilized nitrocellulose sheet in antibody screening, and would reasonably have expected success in view of Smith's teaching that modification to the method can provide a simpler and rapid screening procedure (page 123, right column, 3rd full paragraph). The choice of particular conventional working conditions (e.g., holding area with protruding portion and sustainable releasing of substance) is deemed merely a matter of judicious selection and routine optimization which is well within the purview of the skilled artisan having the cited reference before him/her.

From the teachings of the references, it is apparent that one of ordinary skill in the art would have had a reasonable expectation of success in producing the claimed invention. Therefore, the invention as a whole was prima facie obvious to one of ordinary skill in the art at the time the invention was made, as evidenced by the references, especially in the absence of evidence to the contrary.

Conclusion

3. No claim is allowed.

Certain papers related to this application may be submitted to Art Unit 1657 by facsimile transmission. The faxing of such papers must conform with the notices published in the Official Gazette, 1156 OG 61 (November 16, 1993) and 1157 OG 94 (December 28, 1993) (see 37 C.F.R. § 1.6(d)). The official fax telephone number for the Group is 571-273-8300. NOTE: If Applicant does submit a paper by fax, the original signed copy should be retained by applicant or applicant's representative. NO DUPLICATE COPIES SHOULD BE SUBMITTED so as to avoid the processing of duplicate papers in the Office.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to (571) 272-0547.

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance. Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is (866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the problem. The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the problem has been corrected. The USPTO's Patent Electronic Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system

provides Internet-based access to patent application status and history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public.

For all other customer support, please call the USPTO Call Center (UCC) at 800-786-9199.

Any inquiry concerning rejections or objections in this communication or earlier communications from the examiner should be directed to Bin Shen, Ph.D., whose telephone number is (571) 272-9040. The examiner can normally be reached on Monday through Friday, from about 9:00 AM to about 5:30 PM. A phone message left at this number will be responded to as soon as possible (i.e., shortly after the examiner returns to her office).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dr. Jon Weber can be reached at (571) 272-0925.
